

This is the future-defined data center.

The data center you'll need tomorrow.
Available today.

Performance and reliability for what's now.
Innovation and adaptability for what's next.
Only from Lenovo.

Lenovo ThinkSystem™ and ThinkAgile™ data center solutions

Leave behind proprietary infrastructure that locks you into someone else's idea of where you need to go. Powered by Intel® Xeon® processor Scalable family, Lenovo's future-defined data center is built on open standards, with right-sized innovation and the latest capabilities for software-defined environments. Designed for easy scalability, it adapts to shifting workloads with greater efficiency and a lower TCO.

Lenovo ThinkSystem

Spanning servers, storage and networking, Lenovo ThinkSystem solutions deliver the capabilities you need today with the innovation you'll need tomorrow.

- ➔ Always-on reliability
- ➔ The industry's most open management capability
- ➔ Unmatched integration of industry leading solutions

Lenovo ThinkAgile

The speed and agility of cloud with the control of on-premises IT. ThinkAgile solutions are easy to buy and quick to deploy, delivering software-defined infrastructure with simple, cost-effective management.

- ➔ 80% faster time-to-value with enhanced business agility
- ➔ A simpler, more transformative operating and buying experience
- ➔ Pre-integrated, pretested and validated solutions that lower risk

Lenovo Engineered Solutions

Engineered solutions bring together a vibrant ecosystem of industry-leading partners to deliver exhaustively pretested solutions with a friction-free experience for better customer value.

Lenovo Services

All Lenovo data center solutions are backed with comprehensive services that span strategic consulting through solution design, deployment and ongoing support.

The future-defined data center provides:

Enterprise simplicity

- Scales easily with open modular design
- Faster time to value with efficient integrated approach and comprehensive services
- Simplified systems management

Agility through software-defined infrastructure

- Pre-integrated systems with full capability on delivery
- Co-developed with industry leading partners

Exponential growth through hyperscale

- Customized down to specific components and processes
- Worldwide manufacturing and delivery with world-class services

What can the future-defined data center do for you?
