# Hvorfor The Art of War?

- Den er relevant I dagens IT sikkerheds landskab
- Den er anvendelig I det daglige sikkerheds arbejde
- Den indeholder gode råd til at håndtere konflikter I Cyberspace

# War is a Grave Concern of the State and must be Thoroughly Studied

---

- IT Security is a grave concern for a company and must be thoroughly studied and prepared for
- How are you managing Incident response?
- How are you managing risk?
- Is your staff well trained?
- Has the leadership taken responsibility?
- Is there capability inhouse for dealing with incidents?
- Is there a signed and agreed upon strategy for handling IT security?
- What about any outsourcing in place or managed security services?

# Attack him where he is unprepared, appear where you are unexpected

---

- Have we secured all avenues of access?
- Do we know all avenues of access?
- Do we know about any shadow IT in place?
- Have we prepared ourselves for the inevitable breach?
- Have we trained for this inevitable breach?
- Do we have procedures for this inevitable breach?

# So in war, the way is to avoid what is strong and to strike at what is weak

---

- People are the weakest link
- Regular training of both staff and IT!
- Unpatched systems are weak!!
- Patch management is one of the solutions here, including 3<sup>rd</sup> party software!!
- Baselining of systems is another

# Spørgsmål?
